5つの構造的危機

農業: 収益性が低く、投資が流入しない

Agriculture: Low profitability, uninvestable asset class.

食料: 価格高騰と安全保障リスク

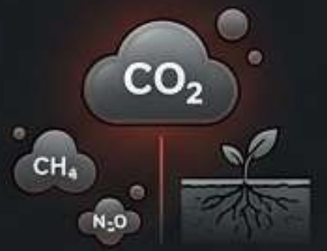

Food: Price spikes and acute security risks.

医療・栄養: 栄養問題が国家の医療費を圧迫

Health/Nutrition: Poor nutrition bankrupting national health budgets.

気候 (GHG): CO_2 偏重。CH_4, N_2O, 土壌炭素が未評価

Climate (GHG): CO_2 bias. CH_4, N_2O, and Soil Carbon remain unvalued.

金融: 気候ファイナンスの停滞、途上国への資金未達

Finance: Climate finance stagnation; funds failing to reach developing nations.

なぜ既存の金融工学は機能しないのか？

Why does existing financial engineering fail?

金融工学は「価値を構造化する技術」だが、
価値そのものを生み出す
「Planetary Health技術」が欠如していた。

Financial engineering structures value,
but it lacks the foundational
Planetary Health Technologies required
to generate real physical value.
